

Debridement: Who, When & How in Long-Term Care

DESCRIPTION

Debridement is a fundamental component of wound management and a standard of practice. Preparing the wound bed for healing must be done adequately to facilitate the best outcomes and provide opportunities for closure and subsequent healing.

This program will discuss the: Who, When and How components of chronic wound debridement — specifically for the population residing in the long-term care setting. Content will include assessment prior to debridement (e.g., vascular studies to the lower extremity), types of debridement and precautions/contraindications of debridement. Attend this session to better recognize which wounds will benefit from debridement and how to best accomplish this in the long-term care setting.

OBJECTIVES

At the end of this program participants will be able to:

- Discuss debridement as a component of the Wound Bed Preparation paradigm;
- Recognize when and what to debride from the wound;
- Identify precautions and contraindications for debridement;
- Verbalize the different types of debridement.

FACULTY

- Pamela Scarborough, PT, DPT, MS, CWS, CEEAA
Director Of Public Policy & Education, AMT
- Lynn A. Tabor, MS, RN, WCC
Vice President of Education & Training, AMT
